

Public Safety AI Oversight

Solution Brief

Governance of surveillance systems, predictive policing algorithms, and emergency response AI with civil rights protections enforced at the system level. Claviger monitors for bias, protects against discriminatory patterns, and prevents policy violations.

Bias Detection & Prevention: Continuous analysis of arrest/stop patterns by neighborhood, demographics, and offense type. When bias patterns emerge, the system alerts human oversight and can restrict certain AI recommendations.

Privacy Enforcement: Facial recognition systems are constrained by location policies and time-of-day restrictions. Automatic deletion of surveillance footage follows strict retention policies. Privacy violations trigger immediate escalation.

Emergency Response Governance: Dispatch AI systems for police, fire, and medical services are constrained by fairness rules. Response time equity across neighborhoods is continuously monitored and enforced.
