

Trading AI Governance

Solution Brief

Real-time governance enforcement for algorithmic trading systems with SEC and FINRA compliance. Claviger enforces trading policies at machine speed, with every trade decision cryptographically verified and audit trail automatically generated.

Enforcement at Execution Speed: Apex Gate validates trading parameters before order submission. Market manipulation patterns are detected and blocked before execution. Policy violations trigger immediate lockout with immutable evidence generation.

Regulator-Ready Evidence: Complete cryptographic proof of trading decision compliance flowing directly to SEC/FINRA systems. No manual audit report construction required. Evidence is generated operationally, not documented retrospectively.

Real-World Impact: One firm deployed Claviger to govern 4,200 algorithmic trading agents across 5 trading venues. Result: 100% policy compliance, zero market abuse incidents, regulator audit time reduced from 6 weeks to 2 days.
